# 11 ADVANTAGES OF USING

# VIRTUAL REALITY IN YOUR CLINIC

[AND ALSO INCREASE ITS PROFITABILITY]

---

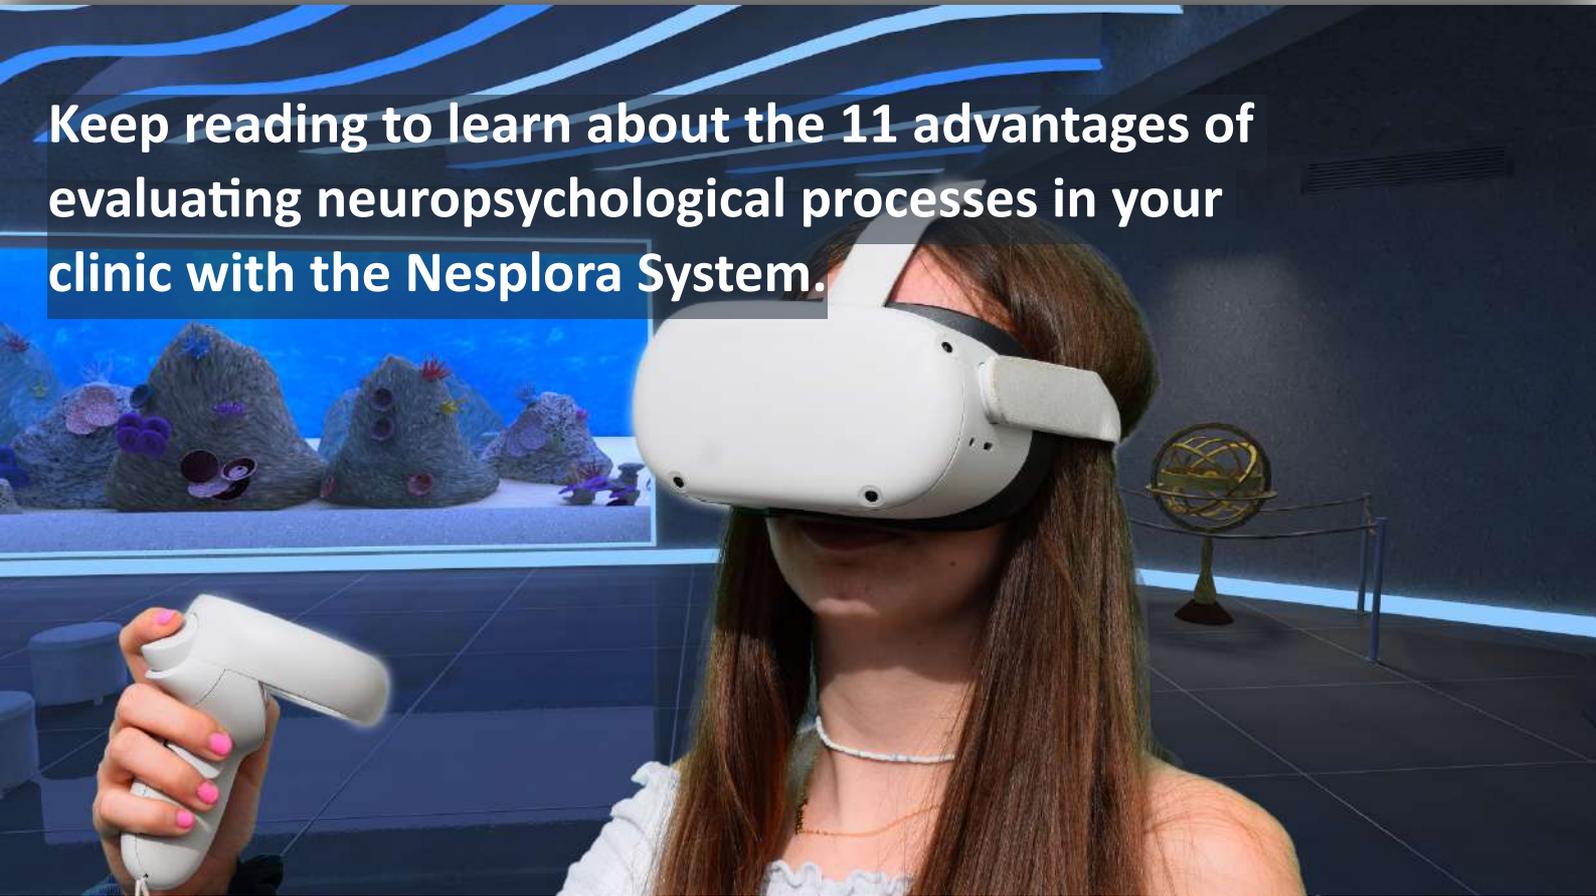

At Nesplora we design, develop and market the **only neuropsychological assessment tests using virtual reality** to offer you and your clinic a competitive advantage in your sector.

Our tests assess variables such as **attention, memory, impulsivity, executive functions and motor response**, among others.

They allow a **neuropsychological assessment** of the higher cognitive functions, which will help you **diagnose with precision neurological disorders such as ADHD; evaluate brain damage, disorders such as depression or anxiety, substance abuse and cognitive impairment; or make a neuropsychological profile** that allows for a **differential diagnosis** with **learning disabilities** or an evaluation of the efficacy of your treatments.

The profile made of the assessed subject also lets you know their **strengths and weaknesses** so you can adapt the type of intervention to their necessities.

Keep reading to learn about the **11 advantages of evaluating neuropsychological processes in your clinic with the Nesplora System.**

## THE BEST OF VIRTUAL REALITY

- 1. Ecological validity:** Nesplora's tests are laboratory **multitasking tests** that imitate the use of neuropsychological functions in real situations, they are the closest thing to assessing a patient in their real environment and getting to know their difficulties.
- 2. Sensation of complete immersion:** Without halo effect, distractors or environmental influences like unwanted distractors. Scenarios without cultural influence and that are motivating for assessment. (Delgado & Moreno, 2012)
- 3. Unbiased evaluation:** This automated test doesn't let the psychologist interfere in the process, making the assessment completely standardized.
- 4. Gathering of exclusive variables:** including Motor Activity, Visuospatial Memory, Learning Potential or Quality of the Attentional focus.
- 5. The best psychometric results:** Our validated data study with the newest psychometric and artificial intelligence techniques offers data on reliability, validity and sensibility, the highest on the market.
- 6. Updates:** Always looking out for the novelties in virtual reality, so you know how to take the most advantage of your device, and the investigations regarding this technology.

**7. Automatic results:** In 30 minutes the assessment is completed, and the software processes the data in that moment so the results report is available instantly. 🗨️

**8. Custom reports:** Add value and professionalism with your company's logo and data.

**9. Increase your clinic's visibility:** appear in our web <https://nesplora.com/en/near-you/> and increase your visibility. Everyone will know that your center disposes of new generation technology for assessments.

**10. Our backing:** In Nesplora, we give **scientific and technical support** so that you always have your system ready and the results offered have their maximum value.

**11. Community support:** With the Seal of Excellence of the European Commission, CE marking and Medical Device certificate, our tests can be used in any forensic, clinical or research field with all the guarantees.

**Join the professionals at the forefront of neuroscience!**
